

Trend Micro™ ServerProtect™ for Microsoft™ Windows™/Novell™ NetWare™

Centrally Managed Virus Protection for Enterprise-class Servers

PROBLEM

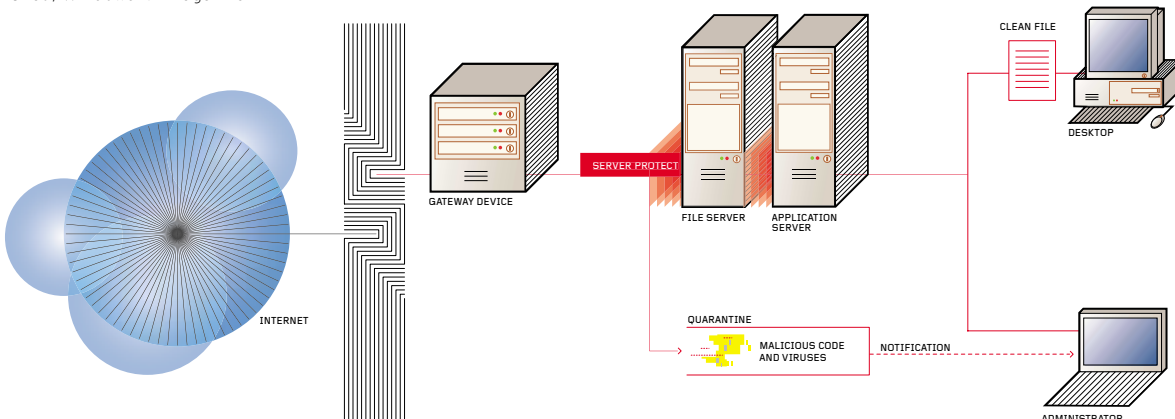

Companies use servers to store, share, and distribute vast amounts of data. It's crucial to keep antivirus software properly installed, monitored, and updated on every server to protect the important electronic assets of an organization. With the emergence of mixed threat attacks, like Nimda and Code Red, a failure on a single server can quickly impact the entire network. Since these new viruses embed themselves throughout the network, they can easily re-infect the company even after initial cleaning. During virus outbreaks, administrators are competing with time and resources to contain the spread of the virus and repair the damages before the virus overruns the network.

STRATEGY

Trend Micro ServerProtect delivers the industry's most reliable virus protection while integrating leading edge security service capabilities. ServerProtect scans and detects viruses in real time and incorporates damage cleanup services to help remove malicious code and repair any system damage caused by them. Administrators can use one management console to centrally enforce, administer, and update the antivirus program on every server throughout an organization. ServerProtect for Microsoft Windows is a key component of the Trend Micro Enterprise Protection Strategy, which provides a coordinated, multi-layered defense against virus outbreaks. Enterprise Protection Strategy services can quickly deploy outbreak prevention policies to all ServerProtect servers before a new virus pattern file is available, distribute virus patterns to remove any viruses that get through, and help automate the damage cleanup process to resolve problems left by virus infections. As a result, the cost and efforts associated with a virus outbreak can be significantly reduced.

" Because the company has built ServerProtect from the ground up to support large networks, you know it won't collapse when it runs into your monster LAN. Conversely, the product also easily scales down to accommodate smaller networks. "

— Jonathan Chau, Windows NT Magazine

Trend Micro ServerProtect at work: Trend Micro ServerProtect is designed to remove and block infected files on application and file servers. The files are immediately prevented from reaching end users, and the administrator is notified.

KEY BENEFITS

- Reliable and efficient virus protection, backed by industry certifications from Microsoft, IBM, Citrix, and Compaq
- Centralized deployment, management, and reporting to provide easy administration and policy enforcement of all servers
- Cross-platform protection for the heterogeneous network to deliver true, enterprise-class support
- ServerProtect for Windows supports Trend Micro Outbreak Prevention Services to enable policy recommendations to protect ServerProtect servers before a new virus pattern file is available

Trend Micro™ ServerProtect™ for Microsoft™ Windows™/Novell™ NetWare™

RELIABLE AND EFFICIENT VIRUS PROTECTION

- Proven reliability with numerous certifications including: Microsoft™ Windows™ 2000 Datacenter Server Certified, Citrix™ MetaFrame Certified, IBM™ Server Proven, and Compaq™ Server Certified
- Award-winning scan engine technology with a 14-year track record in delivering comprehensive virus protection for enterprise-class servers

CENTRALIZED DEPLOYMENT, MANAGEMENT, AND REPORTING

- Streamlines initial deployment through centralized remote installation to all major Windows and NetWare Servers
- Enables centralized management through a remote console for system monitoring, software updates, configuration changes, and event reporting
- Leverages Trend Micro Control Manager™ enterprise-wide management capabilities to control multiple ServerProtect Information Servers and deploy product updates to all servers in an organization from a single console

CROSS-PLATFORM PROTECTION FOR THE HETEROGENEOUS NETWORK

- Delivers enterprise-class protection with broad support for major server and storage platforms: *Microsoft Windows .NET Server 2000, and NT, Novell™ NetWare™, Red Hat™ Linux, Network Appliance™ filer, EMC™ NAS, IBM NAS, and Compaq™ NAS*

SUPPORT FOR TREND MICRO ENTERPRISE PROTECTION STRATEGY

- ServerProtect for Microsoft Windows is a key component of the Trend Micro Enterprise Protection Strategy, an industry-unique approach that addresses mixed threat attacks through the coordinated delivery of products, services, and expertise.
- Supports Outbreak Prevention Services (via Trend Micro Control Manager) to contain virus outbreaks through the rapid deployment of outbreak prevention policies before pattern files are available
- Removes virus remnants for all servers to limit the likelihood of a virus re-infection with the automated virus cleaning and repairing capabilities
- Identifies holes in the security system by running the vulnerability scanner feature, which is available upon request

SYSTEM REQUIREMENTS

Normal Server (antivirus server)

- Microsoft™ Windows™ .NET Server, Microsoft Windows 2000 Professional/Server (with Service Pack 1 or higher); Microsoft Windows NT™ 4.0 Server/Workstation (with Service Pack 6a)
- Novell™ NetWare™ 5.1 (with Support Pack 4), Novell NetWare 6.0 (with SP 2), Novell NetWare 6.5
- 256MB RAM or higher
- 50MB of free disk space
- Intel™ Pentium™ 200MHz processor or equivalent

Information Server (central management server)

- Microsoft Windows .NET Server, Microsoft Windows 2000 Professional/Server (with Service Pack 1 or higher); Microsoft Windows NT™ 4.0 Server/Workstation (with Service Pack 6a)
- 256MB RAM or higher
- 70MB of free disk space
- Intel Pentium III 450 MHz processor or equivalent
- To manage NetWare servers, a Windows .NET/2000/NT machine must be installed as an Information Server

Management Console

- Microsoft Windows .NET Server, Microsoft Windows 2000 Professional/Server (with Service Pack 1 or higher); Microsoft Windows XP; Microsoft Windows NT 4.0 Server/Workstation (with Service Pack 6a); Microsoft Windows Me/98/95

TrendLabs™

24X7 ANTIVIRUS SUPPORT

- Trend Micro products are backed by timely, high-quality service from TrendLabs, a global network of five regional antivirus research and support centers with an ISO 9002-certified headquarters. A team of more than 250 engineers and antivirus specialists operate around the clock to monitor virus activity, develop information on new threats, and deliver prompt, effective strategies.

- For more information about Trend Micro service and support, contact TrendLabs at <http://www.trendmicro.com/support>.

TREND MICRO ENTERPRISE PROTECTION STRATEGY

Trend Micro ServerProtect for Microsoft Windows is a key component of the Trend Micro Enterprise Protection Strategy, an industry-unique approach to antivirus and content security that addresses mixed-threat attacks through coordinated delivery of products, services and expertise throughout the outbreak lifecycle - outbreak prevention, virus response, assessment and restoration. From attack-specific policy recommendations to cleanup and restoration templates, Enterprise Protection Strategy helps organizations continuously adapt as threats evolve.
